Final Exam
Linear Algebra 2
15-1-2013

Name:
Number:
Serial:
Section: (1)

1. (5 points) Determine whether the statement is true $(\mathbf{T})$ or false $(\mathbf{F})$ :
(a) [ ] A positive definite matrix is invertible.
(b) [ ] If $\mathbf{A}$ is positive definite, then $-\mathbf{A}$ is negative definite.
(c) [ ] If $\mathbf{A}$ is a square matrix, then $\mathbf{A}^{\mathbf{T}} \mathbf{A}$ and $\mathbf{A A}^{\mathbf{T}}$ are orthogonally diagonalizable.
(d) [ ] If $\mathbf{A}$ is both invertible and orthogonally diagonalizable, then $\mathbf{A}^{-1}$ is orthogonally diagonalizable.
(e) [ ] The matrix $\left[\begin{array}{rr}1 & -2 \\ 2 & 1\end{array}\right]$ is orthogonal.
2. (3 points) Express the quadratic form $6 x_{1}^{2}+4 x_{2}^{2}-7 x_{3}^{2}-2 x_{1} x_{2}+4 x_{1} x_{3}+x_{2} x_{3}$ in the matrix notation $\mathbf{x}^{\mathbf{T}} \mathbf{A} \mathbf{x}$, where $\mathbf{A}$ is symmetric matrix.

$\qquad$
4. (4 points) Let $\mathbf{f}=1-x^{2}$ and $\mathbf{g}=3+12 x-4 x^{2}$. Use the inner product

$$
\langle\mathbf{f}, \mathbf{g}\rangle=a_{0} b_{0}+a_{1} b_{1}+a_{2} b_{2}
$$

on $\mathbf{P}_{\mathbf{2}}$ to compute the cosine of the angle between $\mathbf{f}$ and $\mathbf{g}$.

7. (15 points) Find a matrix $\mathbf{P}$ that orthogonally diagonalizes

$$
\mathbf{A}=\left[\begin{array}{rrr}
2 & -1 & -1 \\
-1 & 2 & -1 \\
-1 & -1 & 2
\end{array}\right]
$$
