| :--- | :--- | :--- | :--- |
| Semester: | Second Semester |  |  |
| Exam: | First Exam | Course Number: <br> Instructor Name: | Feras Awad |
| Exam Date: | $03 / 04 / 2017$ | Student Name: | - |
| Exam Day: | Monday | University ID: | - |
| Mark: | $[20]$ | Serial: | - |

1. The iteration formula

$$
x_{n+1}=x_{n}-\left(\cos x_{n}\right)\left(\sin x_{n}\right)+R \cos ^{2} x_{n}
$$

where $R$ is a positive constant, was obtained by applying Newton's method to some function $f(x)$. What was $f(x)$ ? For what value does the sequence converge?

3. Show that the function $g(x)=2^{-x}$ has a unique fixed point on $\left[\frac{1}{3}, 1\right]$, then use fixed-point iteration to find the third approximation $p_{3}$ starting with $p_{0}=1$.

5. Suppose $x_{i}=i$, for $i=0,1,2,3$ and it is known that

$$
P_{0,1}(x)=x+1, \quad P_{1,2}=3 x-1, \quad \text { and } \quad P_{1,2,3}(1.5)=4
$$

Find $P_{0,1,2,3}(1.5)$.
