

## Philadelphia University

Faculty of Engineering - Department of Mechatronics Engineering  
First Semester 2020/2021

### Course Details:

|                            |   |
|----------------------------|---|
| <b>Title:</b>              | <b>Machine Intelligence</b> (0640424)   |
| <b>Course Type:</b>        | Compulsory  |
| <b>Class Time:</b>         | 11:15 – 12:45 Monday/Wednesday  |
| <b>Prerequisite:</b>       | Automatic Control Systems   |
| <b>Credit Hours:</b>       | Three credit hours (15 weeks per semester, approximately 44 contact hours)  |
| <b>Textbook:</b>           | “Computational Intelligence: Synergies of Fuzzy Logic, Neural Networks, and Evolutionary Computing” by N. Siddique and H. Adeli. Wiley Publication 2013   |
| <b>Course Description:</b> | This course introduces the student to intelligent control theory. The course material is divided in two main parts: Artificial Neural Networks and Fuzzy Logic Control techniques. Emphasize is provided for intelligent control applications of mechatronic systems. |
| <b>Website:</b>            | <a href="http://www.philadelphia.edu.jo/academics/amahasneh">www.philadelphia.edu.jo/academics/amahasneh</a>  |
| <b>Instructor:</b>         | <b>Dr. Ahmad Jobran Al-Mahasneh</b><br>Email: <a href="mailto:amahasneh@philadelphia.edu.jo">amahasneh@philadelphia.edu.jo</a><br>Office: Engineering building, room E06406<br>Office hours: Sun, Tus, and Thu: 10:00-11:00. Mon and Wed 10:15-11:15.                 |

### Course Learning Outcomes:

Upon successful completion of this course, the student should be able to:

|     | Course Learning Outcomes   | ABET L.O. | Taxonomy                      |
|-----|--|-----------|-------------------------------|
| 1.  | Recognize the difference between classical and intelligent control.                | 1         | Knowledge and Understanding   |
| 2.  | Know the basics of machine intelligence.   | 1         |                               |
| 3.  | Understand the theory and mathematical models of fuzzy systems and neural networks | 1         |                               |
| 4.  | Derive mathematical equations for fuzzy and neural network systems.                | 1         | Thinking and Analysis         |
| 5.  | Apply solutions to mathematical problems as they relate to intelligent systems.    | 6         |                               |
| 6.  | Analyze control problems and develop solutions using intelligent algorithms.       | 6         |                               |
| 7.  | Design intelligent controllers for mechatronic plants                              | 2         |                               |
| 8.  | Apply MATLAB, Simulink, Fuzzy toolbox, and Neural Network toolbox.                 | 2, 7      | Practical and Specific Skills |
| 9.  | Simulate intelligent controller designs and analyze the results.                   | 1, 6      |                               |
| 10. | Work in teams and write homework reports   | 3, 5      | Communication Skills          |

| Week | Subject  |
|------|--|
| 1    | <b>Introduction to Artificial Intelligence:</b><br>Definition, History, and Applications                     |
| 2    | <b>Part I Neural Networks</b><br>Perceptron; Activation Functions; XOR Problem                               |
| 3    | Feed-Forward Architecture: Single and<br>Multi-Layers Radial Basis Function Network<br>Probabilistic Network |
| 4    | Learning Algorithms: Gradient Descent / Delta-Rule   |
| 5    | Learning Algorithms: Backpropagation   |
| 6    | Unsupervised Learning: Classification and Competitive Network  |
| 7    | Recurrent Neural Networks:<br>Hopfield Network; Jordan Network<br><b>Mid EXAM</b>                            |
| 8    | Neural Network Application: System Identification and Control  |
| 9    | Introduction to Deep Learning  |
| 10   | <b>Part II Fuzzy Logic</b><br>Fuzzy Logic; Fuzzy Sets; Membership Functions; Fuzzy Operations                |
| 11   | Fuzzy If-Then Rules; Fuzzification; Defuzzification  |
| 12   | Inference Mechanism: Mamdani and Sugeno  |
| 13   | Fuzzy Modeling   |
| 14   | Fuzzy Control; Design of Fuzzy Controllers   |
| 15   | Review<br><b>FINAL EXAM</b>  |

**Assessment Guidance:** Evaluation of the student performance will be based on the following:

**Exams.** One in-class exam will be given. It will cover the first 7 weeks of lectures.

**Quizzes.** Two 10-minute quizzes will be given to the students throughout the semester. The quizzes will be used as bonus points to help the students with their grade.

**Homework.** Students are expected to program learning algorithms for Neural Network structures, simulate the models, analyze the results, and write a technical report.

**Final Exam.** The final exam will cover all the class material.

**Grading policy:**

|   |      |
|---|------|
| Mid Exam                                | 30%  |
| Quizzes, homework<br>and participation. | 20%  |
| Final Exam                              | 50%  |
| Total                                   | 100% |

**Attendance policy:**

Absence from classes and/or tutorials shall not exceed 15%. Students who exceed the 15% limit without a medical or emergency excuse, acceptable to and approved by the Dean of the relevant college/faculty, shall not be allowed to take the final examination and shall receive a mark of zero for the course. If the excuse is approved by the Dean, the student shall be considered to have withdrawn from the course.
