Course Project

The project must be a real system

- ➢ Introduction about project (The requirement)

- ➢ Convert the software requirement into ER Diagrams (the system should be 2<= entity <=4)

- ➢ Convert ER Diagrams into Relational Schemas

- ➢ Create tables in SQL, then Insert records (should be =3 records for each entity)

- ➢ apply 7 different 'meaningful queries' on your application then show the results

An important Note:

The PowerPoint is the only way of presenting your work
