

## Courses for Semester #1

Ident. No. (Code)	Course Name	Status	Note
MM11	Advanced Engineering Mathematics	Done	
MM12	Advanced programming	Done	
MM13	Industrial Mechatronics and Robotic Systems	Done	Krzysztof, Damian or Tariq (LSBU) , Revised by Nabil.
MM14	Mechatronics Systems Modeling and Simulation	Done	
Elect.#1*			

\*see electives summary

MM: Master in Mechatronics  
 1: 1<sup>st</sup> Semester  
 1 to 4: Serial No. of Course in the Semester

<b>Advanced Engineering Mathematics, FINAL</b>					
<b>Identification number</b>	<b>Workload</b>	<b>Credits</b>	<b>Semester</b>	<b>Frequency of offer</b>	<b>Duration</b>
<b>MM11</b>	180 h	6 ECTS 3 CH	1	Winter semester	1 Semester
<b>1</b>	<b>Courses</b> Course instruction: 2 HPW Exercise: 2 HPW		<b>Contact time</b> 4 HPW / 60 h	<b>Self-study</b> 120 h	<b>Planned group size</b> 20 students
<b>2</b>	<b>Course Description</b> Build on the undergraduate students' math knowledge in order to provide the necessary skills in analytical and computational mathematical methods to work in a scientific environment and solve engineering problems in research and development projects.				
<b>3</b>	<b>Learning outcomes / competencies</b> On completing the course, students will be able to have to following skills: <ul style="list-style-type: none"> <li>▫ Knowledge and understanding <ul style="list-style-type: none"> <li>A1. Understand analytical and computational principles in advanced mathematical methods.</li> <li>A2. Identify different transformations methods for the solution of advanced problems.</li> </ul> </li> <li>▫ Intellectual skills <ul style="list-style-type: none"> <li>B1. Formulate strategies for solutions to advanced engineering problems based on the methods taught</li> <li>B2. Select mathematical tools appropriate for advanced engineering problems</li> </ul> </li> <li>▫ Professional and practical skills <ul style="list-style-type: none"> <li>C1. Apply advanced mathematical methods for solving engineering problems.</li> <li>C2. Recognize the advantages / disadvantages of different computational solutions and select appropriate algorithms and software accordingly</li> </ul> </li> <li>▫ General and transferrable skills <ul style="list-style-type: none"> <li>D1. Use a structured approach to advanced quantitative engineering problems.</li> <li>D2. Communicate solutions adequately</li> </ul> </li> </ul>				
<b>4</b>	<b>Contents</b> <ul style="list-style-type: none"> <li>▫ Analytical Methods: Real and complex analysis; Partial differential equations, Fourier Transforms; Laplace transforms; Difference equations; Z-Transforms; advanced matrix operations and manipulations</li> </ul> <b>Computational Methods:</b> Computer arithmetic; Numerical solutions of nonlinear equations and systems; Numerical solutions using least squares methods; Optimization theory.				
<b>5</b>	<b>Teaching Method</b> Lectures, tutorials, problem solving, modeling, and self-studies.				
<b>6</b>	<b>Requirements</b> Bachelor degree (BSc, BEng) in Engineering				

<b>7</b>	<b>Examination</b> <i>Written in-class exams; Take-home exams</i>
<b>8</b>	<b>Requirements for awarding credit points</b> <i>Module examination</i>
<b>9</b>	<b>Significance of the mark for the final score</b> <i>70%</i>
<b>10</b>	<b>Representative module and full-time teachers</b> <i>Name of module coordinator at offering institution</i>
<b>11</b>	<b>Other Information</b> <b>Books</b> <ul style="list-style-type: none"> <li>▫ <i>K. A. Stroud, Advanced Engineering Mathematics, Industrial Press, 2011</i></li> <li>▫ <i>S. Chapra: Applied Numerical Methods with MATLAB, 3rd ed. McGraw Hill 2011.</i></li> <li>▫ <i>E. Kreyszig, Advanced Engineering Math, Wiley Publisher. 10<sup>th</sup> edition, 2010</i></li> </ul>

## Advanced programming, FINAL

Identification number	Workload	Credits	Semester	Frequency of offer	Duration
MM12	180 h	6 ECTS 3 CH	1	Winter semester	1 Semester
1	<b>Courses</b> Course instruction: 2 HPW Exercise: 2 HPW	<b>Contact time</b> 4 HPW / 60 h	<b>Self-study</b> 120 h	<b>Planned group size</b> 20 students	
2	<b>Course Description</b> Motivate Students' knowledge of Object Oriented Concepts (OOP). Teaching the knowledge and skills needed to develop reusable, quality programs. Using OOP to design and implement complex and real-time systems and to increase their proficiency in programming using available software Packages.				
3	<b>Learning outcomes / competencies</b> On completing the course, students will be able to have the following skills: <ul style="list-style-type: none"> <li>▫ Knowledge and understanding                             <ul style="list-style-type: none"> <li>A1. Tell the principles of Object Oriented paradigms (OOP).</li> <li>A2. Use of knowledge of OOP to design and implement complex and real-time systems.</li> </ul> </li> <li>▫ Intellectual skills                             <ul style="list-style-type: none"> <li>B1. Formulate and model designs for solutions to advanced engineering problems based on the methods taught</li> <li>B2. Choose modeling and programming tools appropriate to solve complex systems.</li> </ul> </li> <li>▫ Professional and practical skills                             <ul style="list-style-type: none"> <li>C1. Apply OOP methods in control and mechatronic systems. in engineering problems.</li> <li>C2. Create and model complex problems by using appropriate tools.</li> </ul> </li> <li>▫ General and transferrable skills                             <ul style="list-style-type: none"> <li>D1. Get hand-on experience in OOP method of thinking.</li> <li>D2. Communicate solutions adequately</li> </ul> </li> </ul>				
4	<b>Contents</b> Analytical Methods: Object-Oriented Paradigm (Static, Dynamic). Parallel, Distributed Systems. Introduction to Database System. Practical Methods: The use of OOP to analyze, design, and implement complex systems. Choose an application example to evaluate its performance. The use of Unified Modeling Language (UML) as a tool for designing and implementing the control and mechatronic systems. Application using available software (LABVIEW, MATLAB, or any OO-Language such as Java).				
5	<b>Teaching Method</b> Lectures, tutorials, problem solving, modeling, self-studies.				
6	<b>Requirements</b> Bachelor degree (BSc, BEng) in Electrical Engineering, Mechanical Engineering or Computer Science				
7	<b>Examination</b>				

	written examination
<b>8</b>	<b>Requirements for awarding credit points</b> Module examination
<b>9</b>	<b>Significance of the mark for the final score</b> 70%
<b>10</b>	<b>Representative module and full-time teachers</b>
<b>11</b>	<b>Other Information</b> <b>Books</b> <ul style="list-style-type: none"> <li>▫ Beginning C# Object-Oriented Programming, Apress, 2011.</li> <li>▫ Beginning Visual C# 2012 Programming, John Wiley &amp; Sons, 2012.</li> <li>▫ Real-Time Object Uniform Design Methodology with UML, Springer; 2007.</li> </ul>

## Industrial Mechatronics and Robotic Systems, Krzysztof, Tariq Sattar, revised by Nabil

<b>Identification number</b> MM13	<b>Workload</b> 180 h	<b>Credits</b> 6 ECTS 3 CH	<b>Semester</b> 1	<b>Frequency of offer</b> Winter semester	<b>Duration</b> 1 Semester
<b>1</b>	<b>Courses</b> Course instruction: 2 HPW Exercise: 2 HPW		<b>Contact time</b> 4 HPW / 60 h	<b>Self-study</b> 120 h	<b>Planed group size</b> 20 students
<b>2</b>	<b>Course Description:</b> The main objectives of this course are to introduce: <ol style="list-style-type: none"> <li>1. The different automation systems used in modern industry and the use of robots in soft automation ones.</li> <li>2. The fundamental transformation techniques from different frames of reference and kinematic analysis of robots.</li> <li>3. Robot dynamics.</li> <li>4. Machine vision.</li> </ol>				
<b>3</b>	<b>Learning outcomes / competencies</b> On completing the course, students will be able to have to following skills: <ul style="list-style-type: none"> <li>▫ <b>Knowledge and understanding</b> <ol style="list-style-type: none"> <li>A1. Classify the different industrial automation types.</li> <li>A2. Classify the different types of robots.</li> <li>A3. Derive the transformation matrices between different frames of references.</li> <li>A4. Formulate the forward and inverse kinematics problems.</li> <li>A5. Clarify the machine vision concepts.</li> </ol> </li> <li>▫ <b>Intellectual skills</b> <ol style="list-style-type: none"> <li>B1. Analyze robots motion.</li> <li>B2. Use inverse kinematics to calculate the inputs for the actuators.</li> <li>B3. Design of the robots links considering the static and dynamic analysis.</li> </ol> </li> <li>▫ <b>Professional and practical skills</b> <ol style="list-style-type: none"> <li>C1. Apply robot programming for robots to achieve a given task. .</li> <li>C2. Create robots models for design and analysis.</li> <li>C3. Apply machine vision technology for robot control.</li> </ol> </li> <li>▫ <b>General and transferrable skills</b> <ol style="list-style-type: none"> <li>D1. Use information Technology for design and analysis. .</li> <li>D2. Communicate solutions adequately</li> <li>D3. Lifelong self-learning.</li> </ol> </li> </ul>				
<b>4</b>	<b>Contents:</b> Automation and robots- Robot classifications- Robot applications in Manufacturing - Performance specification and robot selection criteria - Fundamental theory and practical applications of robotic manipulators and mobile robots – Forward kinematics – Inverse kinematics- Work space analysis and trajectory planning -Equations of motion- Robot dynamics and statics - Motion planning - introduction to machine vision- basics of robot programming.).				
<b>5</b>	<b>Teaching Method</b> Lectures, tutorials, problem solving, modelling, self-studies.				
<b>6</b>	<b>Requirements</b>				

	Bachelor degree (BSc, BEng) in Electrical Engineering, Mechanical Engineering or Computer Science
<b>7</b>	<b>Examination</b> written examination
<b>8</b>	<b>Requirements for awarding credit points</b> Module examination
<b>9</b>	<b>Significance of the mark for the final score</b> 70%
<b>10</b>	<b>Representative module and full-time teachers</b>
<b>11</b>	<b>Other Information</b> <b>Books</b> <ul style="list-style-type: none"> <li>▫ John J. Craig; "Introduction to Robotics Mechanics and Control"; Pearson Prentice Hall, Latest edition. .</li> <li>▫ Robert J. Schilling; " Fundamental of Robotics- Analysis &amp; Control.</li> </ul>

## Mechatronics Systems Modeling and Simulation, FINAL

Identification number	Workload	Credits	Semester	Frequency of offer	Duration
<b>MM14</b>	180 h	6 ECTS 3CH	1	Winter semester	1 Semester
<b>1</b>	<b>Courses</b> Course instruction: 2 HPW Exercise: 2 HPW	<b>Contact time</b> 4 hpw / 60 h	<b>Self-study</b> 120 h	<b>Planned group size</b> 20 students	
<b>2</b>	<b>Course Description</b> This course covers three main areas: modelling, simulation, and identification. It presents several modelling methodologies that can be used for mechatronics systems. This will cover mathematical and graph models. Software tools, such as MATLAB/Simulink and/or LABVIEW, will be used to simulate the systems and analyze the responses. Also, an introduction to system identification will be provided				
<b>3</b>	<b>Learning outcomes) / competencies</b> On completing the course, students will acquire to following skills: <ul style="list-style-type: none"> <li>▫ Knowledge and understanding <ul style="list-style-type: none"> <li>A1. Recognize modelling and identification concepts as related to mechatronics systems</li> <li>A2. Understand simulation tools and results' analysis</li> </ul> </li> <li>▫ Intellectual skills <ul style="list-style-type: none"> <li>B1 Comprehend complex models</li> <li>B2. Recognize patterns among different systems</li> </ul> </li> <li>▫ Professional and practical skills <ul style="list-style-type: none"> <li>C1. Simulate industrial systems using software packages</li> <li>C2. Identify dynamic physical systems</li> </ul> </li> <li>▫ General and transferrable skills <ul style="list-style-type: none"> <li>D1. Apply modelling and simulation techniques to engineering system design</li> <li>D2. Optimize system performance</li> </ul> </li> </ul>				
<b>4</b>	<b>Contents</b> Modeling and Simulation Principles; System Analogies (mechanical, electrical, fluid and heat elements); Block Diagram Models and Transfer Functions; State Space Models; Model Linearization, Linear Graphs, Modeling of Electrical, Mechanical Systems, and Mechatronics Systems; System Response and Simulation, Model verification and validation; System Identification (parametric vs. nonparametric methods)				
<b>5</b>	<b>Teaching Method</b> Lectures, presentations and movies, discussions, tutorials, problem solving, projects, self study.				
<b>6</b>	<b>Requirements</b> Undergraduate courses in Control and engineering mathematics.				
<b>7</b>	<b>Examination</b> written examination				

<b>8</b>	<b>Requirements for awarding credit points</b> Module examination
<b>9</b>	<b>Significance of the mark for the final score</b> 70%
<b>10</b>	<b>Representative module and full-time teachers</b> Name of module coordinator at the offering institution
<b>11</b>	<b>Other Information</b> Literature: <ul style="list-style-type: none"> <li>▫ Mechatronics: An integrated approach by Clarence de Silva 2005</li> <li>▫ Digital Control Systems: Design, Identification and Implementation by Landau and Zito 2006</li> <li>▫ System Identification: Theory for the user by Lennart Ljung. Prentice Hall 1999</li> <li>▫ Modeling Identification and Simulation of Dynamic Systems by PP van den bosch and AC van der Klauw. CRC Press. 1994</li> <li>▫ Modeling of Dynamic Systems by Lennart Ljung and Torkel Glad. Prentice Hall 1994</li> <li>▫ Identification of Dynamic Systems: An introduction with applications by Rolf Isermann and Marco Munchhof. Springer 2010</li> </ul>
